

Outlook Mail Automator Project Summary

Generated for email attachment testing purposes

1. Project Overview

This project is a local desktop utility designed to automate email sending through Microsoft Outlook. It consists of a Python web server backend and a premium glassmorphic web dashboard frontend.

Key Technologies:

- Backend: Python http.server & win32com.client (Outlook COM automation)
- Frontend: HTML5, CSS3 (Modern Glassmorphic styling), and Vanilla JS
- Environment: Managed using 'uv' for fast and reliable package management

2. Key Features

- **Direct Mail Dispatch:** Sends emails instantly using mail.Send().
- **Outlook Draft Display:** Displays the compose window using mail.Display().
- **Real-time Status Tracking:** Scans Outlook Outbox & Sent Items to check sending status.
- **HTML Live Preview:** Previews rich text/HTML body content dynamically in the browser.
- **Local File Attachments:** Supports adding files via absolute local file paths.

3. Implementation Rules (AGENTS.md)

1. All instructions, plans, and reports are written in Korean.
2. Clarify ambiguous requirements before creating implementation plans.
3. Query Context7 MCP for library details before introducing new libraries.
4. Use sequential-thinking MCP for multi-step plans and complex tasks.
5. Do NOT write code before obtaining explicit approval for the implementation plan.
6. Python package management is strictly handled via 'uv'.
